DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the Search Report is not considered to be an information disclosure statement (IDS) complying with 37 CFR 1.98. 37 CFR 1.98(a)(2) requires a legible copy of: (1) each foreign patent; (2) each publication or that portion which caused it to be listed; (3) for each cited pending U.S. application, the application specification including claims, and any drawing of the application, or that portion of the application which caused it to be listed including any claims directed to that portion, unless the cited pending U.S. application is stored in the Image File Wrapper (IFW) system; and (4) all other information, or that portion which caused it to be listed. In addition, each IDS must include a list of all patents, publications, applications, or other information submitted for consideration by the Office (see 37 CFR 1.98(a)(1) and (b)), and MPEP § 609.04(a), subsection I. states, "the list ... must be submitted on a separate paper." Therefore, the references cited in the Search Report have not been considered. Applicant is advised that the date of submission of any item of information or any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the IDS, including all "statement" requirements of 37 CFR 1.97(e). See MPEP § 609.05(a).

Drawings

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The

Art Unit: 2182

replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

3. Claims 5 and 8 are objected to because of the following informalities: line 7 of both claims recites a period (‘.’) after the term ‘software’; it should be semicolon (‘;’). Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Bullman et al.

U.S. Patent Number: 6,928,057 B2 (herein after referred to as "*Bullman*").

6. **Referring to claims 1-9**, *Bullman* teaches a method for communicating a Physical Layer (PHY) mean square error (MSE) to an upper layer device driver, comprising the steps of: (a) receiving a frame by the PHY [see column 5, lines 31-33, 40-49]; (b) computing a MSE for the

Art Unit: 2182

frame by the PHY [see column 6, lines 13-17, 'piggyback packet' and column 7, lines 49-52 and column 8, lines 25-44, 'mean square error value']; sending the MSE and the frame to a Media Access Control (MAC) [see column 5, lines 55 and figure 3, elements 330, 328]; (d) inserting the MSE into a frame status frame (FSF) associated with the frame by the MAC [see column 2, lines 48-55 and column 6, lines 18-25]; and (e) sending the frame and the FSF to the upper layer driver software [see column 6, lines 36-43.]

Although *Bullman* teaches a use of HPNA [see column 5, lines 20-39] to convey and receive data packets between communications devices, *Bullman* is silent regarding the limitations of (f) extracting the MSE from the FSF by the upper layer driver software; and (g) computing an average mean square error (AMSE) based on the MSE by the upper layer software; (g1) computing the AMSE for a history window of frames by the upper layer driver software; (h) comparing the AMSE with a range of AMSE values for a payload encoding; (i) transmitting at the PE if the AMSE is within the range; and j) negotiating a change in the PE if the AMSE is not within the range. However these features are deemed to be inherent to the *Bullman* method since the Applicant's Admitted Prior Art (AAPA) teaches that the above listed steps (f-j) are various capabilities of HPNA [see AAPA page 2, lines 5-22.]

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following documents have been made record of to further show the state of the art as it pertains to AMSE and history window of frames:

Porter et al. U.S. Pat. App. Pub. No.: 2004/0218563 A1
